EDUCATION

Bachelors in Computer Science & IT
Butwal Multiple Campus | 2022 – 2026

Secondary School (Computer Overseer)
Kalika Manavgyan Secondary School, Butwal | 2018 - 2020

SKILL HIGHLIGHT

Next/React js and **Vite** as frontend frameworks
MongoDB, MySQL as **Databases**
Git, GitHub for **Version Control**
Redux, Tanstack Query for **state management**

TailwindCSS, Material UI, ShadCN as **responsive UI designs**
Llamaindex, Langchain for **RAG Applications**
Miscellaneous: Chrome Extensions, Blockchain

EXPERIENCE

- **Full Stack Software Developer at Honeycomb AI (Oct 2025-Present)**
 - Developing an onboarding using FastAPI
 - RAG implementation with Structured Outputs (w Gemini & OpenAI)
 - Frontend with NextJS on Onboarding Process and other necessary pipelines
- **Frontend Developer at Nester (2023-2025):**
 - Led frontend development of [Porto](#), a tweet migration extension with 4000+ users.
 - Integrated AT Proto (Bluesky) Rest APIs.
 - Worked with Codex for feature building and delivering features like filtered tweets import, etc.
 - Integrated Chrome extension service workers & message passing on Porto & Waverly (redacted).
- **Open Source: Contributed Nepali Language on Bluesky's [Github PR](#).**
- **Hackathon: Second runner up on DeSo Winter Hackathon & Lens Spring Hackathon**

PROJECTS

[Porto](#) Built a Chrome extension to import tweets into Bluesky. Implemented Tanstack Query & Router for state and navigation, and Tanstack Tree for archive visualization. Optimized UX with real-time feedback, file uploads, and secure client-side processing. Worked along with file parsing, compression and AT Proto SDK/API.

[EducationGPT](#) Built an AI assistant for an Australian migration agent to guide students on university options. Implemented data pre-processing for fine-tuning, LangChain for model orchestration, and ChromaDB as a vector database. Enabled function calling to LLMs for document handling and query automation.

[Lentlify](#) Built the frontend of a decentralized ad platform on Lens Protocol. Implemented React + TypeScript + Vite with Tailwind CSS for responsive UI, integrated Lens SDK & API for profile/content management, and connected smart contracts via Wagmi & viem. Used Tanstack Query for caching blockchain queries and ConnectKit for wallet integration, delivering a smooth Web3 user experience for advertisers and influencers.

[Blartz](#) Developed the frontend for a decentralized NFT marketplace using React, TypeScript, Next.js, and Tailwind CSS. Integrated MetaMask & custom ABIs for NFT minting, escrow, and wallet management. Implemented wallet-based authentication (PrivyProvider), dynamic image handling, and collection management, delivering a secure and seamless Web3 experience for creators and collectors.

FEATURES

The projects I was included on were featured on multiple international medias / magazines like [LifeHacker](#), [Popular Science](#), [Mashable](#), [Techwiser](#), [01net](#) etc.
